

COPPER TRIPEPTIDE COMPLEX

GHK-Cu

50 MG / 3 ML VIAL

167 mcg PER UNIT

» KEY BENEFITS

- » Stimulates collagen and elastin synthesis
- » Promotes hair growth and follicle health
- » Improves skin firmness and remodeling
- » Accelerates wound healing and tissue repair
- » Powerful anti-inflammatory and antioxidant
- » Supports angiogenesis and nerve regeneration

COPPER TRIPEPTIDE COMPLEX

» GHK-Cu

50 mg / 3 mL Vial

Reference scale showing the milligram dose delivered per unit on a U-100 insulin syringe (100 units = 1 mL). Pre-mixed in bacteriostatic water — no reconstitution required. Draw directly from the vial with a sterile insulin needle.

PER UNIT	TOTAL CONTENT	VOLUME	CONCENTRATION
167 mcg	50 mg	3 mL	16.7 mg/mL

» UNIT ↔ MILLIGRAM REFERENCE

1 unit = 167 mcg · U-100 insulin syringe (100 units = 1 mL)

UNITS	DOSE	UNITS	DOSE
1 unit	167 mcg	12 units	2.00 mg
2 units	333 mcg	15 units	2.50 mg
3 units	500 mcg	20 units	3.33 mg
4 units	667 mcg	25 units	4.17 mg
5 units	833 mcg	30 units	5.00 mg
6 units	1.00 mg	40 units	6.67 mg
8 units	1.33 mg	50 units	8.33 mg
10 units	1.67 mg	100 units	16.67 mg

» HOW TO DOSE

- 01** Allow the vial to reach room temperature. Inspect the solution for clarity.
- 02** Wipe the rubber stopper with a sterile alcohol swab.
- 03** Using a sterile U-100 insulin syringe, draw the desired number of units directly from the vial.
- 04** Tap out air bubbles. Confirm the dose against the reference table above.
- 05** Inject subcutaneously. Rotate sites. Discard the syringe safely in a sharps container.
